

Dear Hiring Team,

The GTM Operations Analyst role at Anaconda caught my attention because it's exactly the kind of work I've been moving toward — being the operational backbone that makes sales and partnership teams more effective through automation, data, and process efficiency.

At RollWorks/AdRoll, I owned the operational side of a 700+ enterprise account territory. I built automated workflows with Clay.com and AI that replaced hours of manual prospecting prep, maintained the CRM hygiene that gave leadership confidence in pipeline reporting, and generated \$1.205M in ARR opportunities by applying data-driven territory prioritization. Exceeding quota in 15 of 18 months wasn't about more calls — it was about better operational systems that surfaced the right accounts at the right time.

What makes me a strong fit for this role specifically is the partnership and sales overlap. At WeFund Mortgage, I coordinate operational data flows across a complex partner ecosystem — borrowers, agents, lenders, title companies, escrow — and built AI-assisted automation with OpenClaw to keep it running efficiently. That's the same muscle this role needs: managing the operational infrastructure that connects partnership and sales teams to reliable data and scalable processes.

I know my background leans more sales-execution than pure analytics, but the last two years have been a deliberate pivot into operations. I've been building the automation systems, maintaining the data quality, and delivering the reporting that this role requires — I just did it from within a revenue-carrying seat. That perspective is an asset: I understand what sales and partnership teams actually need from ops because I've been on the other side.

I'd welcome the chance to discuss how my operational experience maps to Anaconda's GTM needs.
